One stop source for versatile Indian natural stones

Company Profile

Earth stone global is established in 1982 is a pioneer in slate stones in India. Today it has grown with a greater production capacity with own mines & different processing units located in northern / southern part of India, processing different natural stones. Recently it has added another feather in its crown by going in to veneer slate manufacturing & developing ready to use products in many slates / Quartzites.

It has a stunning range of natural stone products varying from Granite, Marble, Sandstone, Slate, Quartzites, Limestone in the basic form of tiles, slabs & block. It is also into production of wide range of different natural stone products with unique colours, texture, shapes, sizes & designs.

The group commitment is **best quality, highly competitive prices & scheduled deliveries**, in order to have long lasting buyer supplier relations. It has developed quality control system in order to inspect each product at every stage to minimize final rejection, resulting into low production cost & maintaining delivering schedules. Being one of the largest production house in India, is capable of doing big quantities in given time frame. Huge range of mosaic & Borders is also our specialty & two plants are totally devoted to this work in Marble, granite, Slates, Quartzites, Limestone & Sandstone. We also do customise carpets, murals & medallions.

our biggest asset is our man power, who is highly trained & totally devoted. This is the key to our success.

Facilities

1. Highly Mechanized mines in Marble, Slates & Sandstone.
2. Marble Gang saw unit
3. Slate & sandstone slabs & tiles.
4. fabrication shop for manufacturing table tops, counter tops etc.
5. complete unit for border, mosaics, murals, medallions, & carpets
6. Stone article unit
7. separate unit for fabrication of Semiprecious products.

Products

Tiles / slabs / Blocks of marble granite, Quartzite, sandstone, limestone
Mosaics, Border Medallions Murals, Carpets in all natural stone.
Fireplaces, Article in marble.
Garden furniture
Inlays
Table tops / Counter tops
Semiprecious stones tiles / slabs / table tops / wash basins
Flagstones
Paving stones, Walling stones, Ledger Stone, Water falls, Ripples
Wave Pattern, Mushroom Stones, Stepping Stone
Pool Coping, Mesh Mount Patterns
Cobbles, pebbles
Veneer Slates

We also undertake supplies as per project requirements

Our product quality is of international standard, reliability & Consistency, at a very reasonable Price.

Stone Veneer

Natural Stone Veneer is a flexible veneer made of thin layer of various types of real stone which can be applied to many different surfaces like indoors or outdoors, like concrete, ceramic, wood, metal, plywood, fiberglass, backer board, tile, dry wall, painted surfaces, MDE, door skins, cabinetry as well as many other substrates.

Natural Stone Veneer has been tested as a covering veneer in many different environments, proving to be a superb material where a **lightweight real stone** finish is desired & heavy solid stone may not be practical. Huge range of colours available in the natural stone veneer adds to its versatile utility. Because it is made from thin layers of real stone, Natural Stone Veneer is a time and labour saving product that does not require all of the standard masonry tools or methods.

Natural Stone Veneer is not recommended for flooring & kitchen countertop applications. You may use in countertops by putting glass, acrylic or such other transparent materials.

Installation

Layout & Patterns

Preparation of the area to be covered and the layout of the Natural Stone Veneer sheets is the same as for natural stone or tile. Time spent preparing the work area will pay off immensely. A preliminary dry fit of Natural Stone Veneer allows for arrangements and orientation of individual sheets, patterns, textures, and colors before final placement. It is recommended that each sheet be dry fit exactly where it will be placed on horizontal or vertical surfaces. Numbering the sheets to track relocation before cutting and trimming is recommended and will save time.

Cutting

Cutting straight lines and curves is best done using long nosed tin snips. Natural Stone Veneer can also be cut with a metal shear, wet saw, or table saw with carbide blade.

Sealers

It is best to pre-seal Natural Stone Veneer sheets prior to installation. This protects and seals the face from adhesives and grout during installation and handling. Natural Stone Veneer can be sealed with the same sealers used for slate, stone tiles, and wood. There are many sealers in the market with various recommended applications. Choose the any sealer for the desired luster and penetration required prior to installation.

Adhesives

Know your adhesives, by understanding the specifics of the adhesive, a good deal of time and cost can be saved. All adhesives should be tested prior to any installation including consideration of moisture and temperature in the planned environment. If the application is outdoors, consideration to thermal expansion needs to be taken into account. Since Natural Stone Veneer expands & contracts with the substrate or delamination may occur. Where adhesive primers are recommended the bond should be tested by the installer before final installation.

Recommended Adhesives

Heavy duty construction adhesive
Solvent free EP adhesive
Pre-mixed groutable tile adhesive
Acrylic copolymer based tile adhesive
Polyurethane based oil based PU construction grade adhesives
Wood, concrete, or masonry repair adhesives
Thick bed tile mortar, latex type tile adhesive, thin sets where air drying can take place. Not recommended for exterior applications
Epoxy or Silicates (with primer only)
Construction grade multi purpose adhesive or Polyester resin with filler.
Double sided foam adhesive (pad & stick)

The back of Natural Stone Veneer may require a filler type adhesive for some applications. For wet environments epoxies, polyester resin and water proof adhesives are the preferred ones. Careful selection is also recommended due to the uneven backing of Natural Stone Veneer. Do not use any fillers in a pressure treated area when using non-catalyzing foam repair type core fillers. Adhesive mix and apply products & applied techniques vary by materials.

Hand Rollers

A hand roller is recommended to remove air between the Natural Stone Veneer and substrate. To properly roll out trapped air, start in the middle of a sheet while firmly rolling to the edge. Do not press too hard while rolling as this may cause back-filled areas to push adhesive out and leave an air void. By proper pre-back-filling and using good rolling techniques a solid, hard surface will be achieved.

Trowels

For best results of adhesive to substrate, a 3/16" notched trowel is recommended. Use a straight trowel for back-filling of voids. Any bumps in the back surface should be sanded flat prior to back-filling. The back of Natural Stone Veneer may require a filler type adhesive to backfill or level out voids of the natural stone. It is always best to back fill or back-butter voids or depressions in the material before application to a substrate.

Tiling, Grouting & Joining

Natural Stone Veneer can be used to create a tiled effect by leaving a grout joint between cut pieces. Sheets may also be butt-jointed for the look of a smaller seam. Due to the thin nature of Natural Stone Veneer a 1/8" to 1/4" grout joint will produce better results. Test show the use of water based epoxy and acrylic premixed grout work well to fill between the cut veneers. During the sponge off process, the epoxy will seal the surface of the Natural Stone Veneer as well. These grouts are also available in several colors to match the existing décor. If desired a deeper grout joint can be achieved by removing material just under the grout joint area with a scraper tool. Modified grout and caulking grout can also be used.

Substrate

In some indoor and most outdoor applications expansion and contraction must be equal to prevent delamination. A flexible adhesive may be considered in this case. Concrete and masonry substrates must be at least 28 days old. Hydrostatic pressure conditions and vapor transmission cannot exceed 3 lbs. per 1,000 sq. ft. (1.36 kg per 92.9 m²) per 24 hours using a calcium chloride test, and retained moisture should be less than 2.5%.

Composition & Variations

Natural Stone Veneer is laminated to a fiberglass and polyester resin substrate. Since Natural Stone Veneer is a natural Stone Veneer, color and texture variances are not defects within the material, but are inherent to it and part of the natural beauty of quarried materials. Natural Stone Veneer cannot be guaranteed to match dye lot to dye lot, so it is recommended that orders take into account future maintenance or re-fit possibilities.

UV & Temperature

The stone surface of Natural Stone Veneer, like most stone elements, acts as a UV inhibitor and will resist high sun conditions for years. When adhered to a substrate, Natural Stone Veneer will handle thermal contraction and or expansion of most standard construction materials. Natural Stone Veneer will handle both high temperatures and freezing without cracking.

Size	12 x 24 (Installation request in selected States)
Thickness	1/8 to 3/16 inch slabs with contours
Texture	Veneer with selection of Stone
Color	Being natural in origin, variations in color, pattern & texture is common. Majority of natural stone being naturally multi-colored in origin, slight variation across different panels is common.
Weight	Average 200 gm/sq. ft. x 2.5 kg/sq.m of 12 ft x 2 ft.
Packing	Each sheet individually wrapped with paper / pp bag. All such sheets in 5 ply corrugated (double box outer).
Dimensions	Dimension: 50" x 24" x 2" = 10 sheets & 4 x 2" = 10 bags
Moisture	Stone & FRP back are both stable in water & moisture. It can be safely use in shower moist & weather affected areas.
Temperature	Veneer is stable from -25 to 60 degree centigrade. The glue solution has to be according to the temperature exposure.
Heat Transfer	Veneer does not absorb any sort of heat transfer on either sides.
Pressure	Veneer is stable upon normal pressures. It can resist high pressure provided it is not in impact from which can damage its surface.
Flexibility	Veneer is a flexible laminate material & can bend upto 12° radius.
Expandability	Veneer does not expand or contract above 3mm. In total, a slight some groove in application will be helpful to take care of this.
Surface	Veneer is also offered in surface surface protection coatings like glass, melt, wax/mineral preservative antistatic coating etc.
Protection	It is recommended to coat the surface of all external applications.
